

All-in-One Software Solution Take the Pain out of Invoicing

Accurate invoicing is vital to any business. Whenever you transfer data for invoicing, you risk costly delays and errors. Automate the process with a vehicle scale software solution that handles all your invoicing needs quickly and accurately.

DataBridge™ MS software's invoicing module simplifies billing by generating invoices for vehicle weighing transactions. This optional feature streamlines your operation by handling everything from recording vehicle weights to generating invoices and compiling reports. There is no need to purchase a separate invoicing software package.

Using a separate invoicing application involves extra expenses and extra work. If you export data files from other systems to an invoicing application, you have to deal with software compatibility issues. Manual data entry can be even worse, requiring workers to spend late nights processing a week's worth of invoices. Either way, there is a real potential for costly errors.

METTLER TOLEDO

Eliminate Errors

DataBridge™ MS software eliminates errors by handling the entire invoicing process. Its built-in invoicing system has direct access to the database of weighing transactions. There is no need to export/import files and no need to enter data manually.

With the DataBridge™ invoicing feature, your billing department has the freedom to set up billing schedules that meet your needs. Specify which customers will be invoiced and how often: daily, weekly, or monthly.

Quick and Easy Process

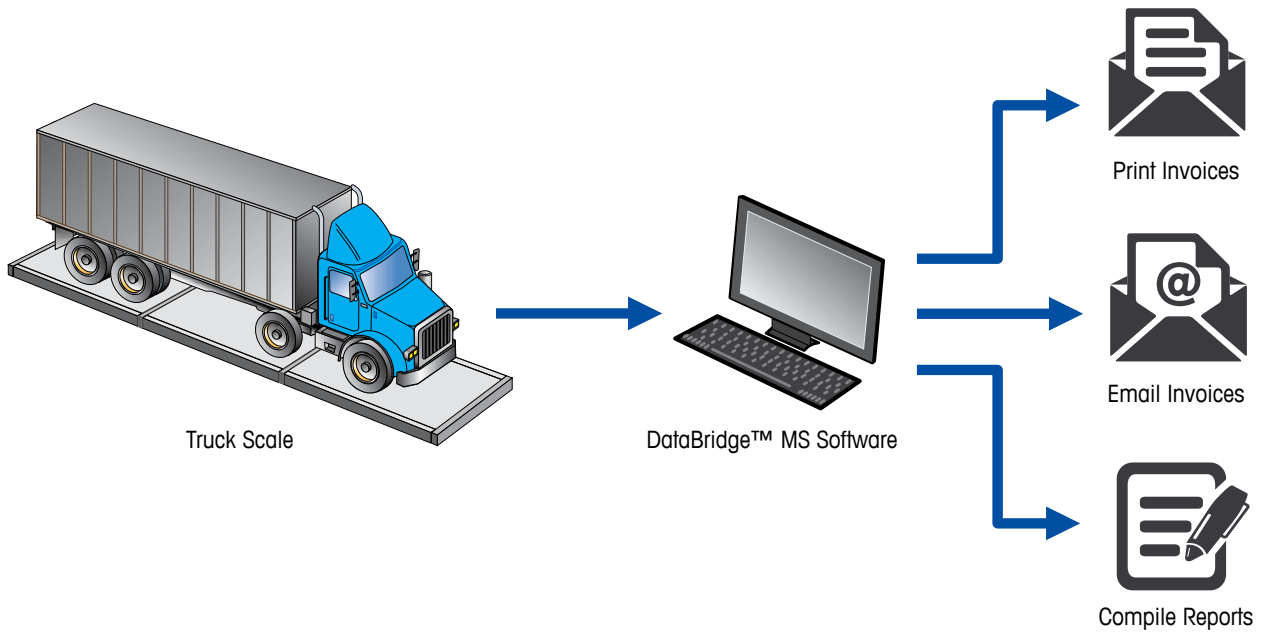

Generating invoices is quick and easy. At the end of a billing period, select a date range and invoice cycle. The system automatically retrieves all weighing transactions that match the criteria. You can generate invoices for all the transactions that were retrieved or

use filters to select specific transactions. A grouping feature gives you the flexibility to create one invoice for each account or separate invoices for an account's vehicles, contracts, facilities, etc.

Invoicing Options

After generating the invoices, DataBridge™ MS software can (1) print paper invoices to mail to customers, (2) Email electronic invoices to customers, or (3) create reports from the invoice database. A security feature allows you to lock the final version of each invoice, ensuring that the files stored in the database match the invoices that are sent to the customer.

With its built-in invoicing capabilities, DataBridge™ MS software makes business operations more efficient. By letting this versatile application do it all, your company can handle its billing quickly and reliably.
